

# ALTO

## PEDESTRIAN STACKER

**PS**

FOR SAFE STACKING AND GOODS HANDLING

**ATLET**

# Robust, powerful and handy

Heavy jobs in tight spaces in a short time. That's when Atlet's new pedestrian stacker, the Alto, comes into its element.

It's a tough little rascal that can take plenty of punishment without complaining about maintenance.

The Alto has no trouble in getting into and out of tight spaces. Although it is strong, durable and rugged. A truck for hard work, in other words.

## Practical solutions

The low chassis and the well-designed mast ensure that the driver always has a good view of the whole truck. The Alto has metal side panels on the chassis to withstand knocks. The tiller arm is positioned to allow the operator to walk easily alongside the truck while driving it.

## Driving

Atlet's pedestrian stacker, the Alto, is designed to cope with hard stints in the warehouse, manufacturing areas and shops. It is no more than 800 millimetres wide and 1898 mm long but with its four-wheel design it is still stable.

With compact dimensions, a tight turning circle and a reliable AC motor it is a dream to drive, even when space is at a premium.

## Ergonomics

The ergonomic steering arm on the Alto is designed to relieve strain on the driver's back and shoulders. This is done by reducing the arm movement required to turn the truck.

The Alto is equipped with easily reached controls and buttons for lifting and lowering in the tiller head.

With the Atlet Alto the driver can always see where the forks are. This gives maximum safety and good ergonomics.

## Ownership

Of the total cost of a truck the purchase price accounts for only a very small part. Hardly 10 per cent, seen over a six-year period. Atlet always tries to lower the total life cycle cost (LCC) of the truck. The Alto is no exception. It is built to Atlet's modular concept, which means that many components are common to many different models, which keeps the price down. It is robustly and ruggedly designed to reduce maintenance costs and all replaceable parts are easily accessible.

The Alto has an internal diagnostic system that makes it easy to locate any faults. The excellent ergonomic design makes for alert and healthy drivers.

## Safety

The Alto has many simple but important safety features.

At heights above 1.5 metres drive is restricted. A PIN code ensures that unauthorized persons cannot drive and low ground clearance reduces the risk of trapping the driver's feet.

The contours of the Alto are rounded to prevent damage to goods and injury to staff. As the driver can see the forks at all times the risk of collisions is reduced.

The Alto is at its best in confined spaces.

The position of the tiller arm makes it easy to operate the truck while walking beside it.

All the controls are easily accessible on the ergonomically designed tiller arm.

Heights are no problem to the tough little Alto. A lift height of up to 3.5 metres and reduced drive speed with load above 1.5 metres gives a safe and efficient pedestrian stacker.

## For heavier loads the Alto PSH is available

The main features are:

- Capacity 1600 kg or 2000 kg
- Lift heights up to 4800 mm
- Battery capacity up to 375 Ah

# You are safe with Atlet

Alto lives up to the Atlet slogan "You are safe with Atlet", comprising safe driving, safe solutions and safe operation.

## Safe driving

- The low chassis gives good visibility and control
- The four-wheel design gives stable and reliable running
- Safe, ergonomic and user-friendly

## Safe operation

- Robust chassis
- High battery capacity, 230 Ah
- Ergonomically designed tiller arm with PIN code

## Safe solutions

- Lowest life cycle cost (LCC)
- AC motor for economical running, ergonomics and safety
- Simple fault detection
